Scheduler Trucks vs. SmartMoving Calendar Trucks

Left: every truck registered in the Scheduler (Admin > Trucks). Right: every distinct "Trucks:" value SmartMoving actually sent on the synced calendar in the current sync window, with how many events used it. For each row, write the matching number from the other side in the blank column — e.g. if Scheduler #3 (ARC 118) is the same truck as Calendar #7 (ARC 118), write "7" next to #3 and "3" next to #7. Leave blank if a calendar entry doesn't correspond to any truck on the left (e.g. a one-off rental).

A few notes from the initial pass, for context while matching:

• Some calendar events list TWO truck names on one job, separated by a comma — those have been split into separate rows here (each counted on its own), rather than shown as one combined entry.

• SmartMoving sends the “ZCMS” prefix (e.g. “ZCMS - 140”) where the Scheduler truck names use “YCMS” (e.g. “YCMS 140”) — likely the same trucks under a different fleet-prefix spelling.

• “HTS TL1 2024 KY HI-CUBE” and “HTS T1 Volvo” always appear together on the same job (order varies) — likely the tractor + trailer pairing for one Scheduler truck (TT1 VOLVO).

• “HTS TL2 GO BIG ORANGE” and “HTS T2 Rental” appear together the same way, pointing at TT2 Big Orange.

• “RYDER RENTAL26” appears paired with two different real trucks (JCM 31 once, ARC 130-2 once) on different jobs — it's a generic rental sub, not one specific truck, so it likely shouldn't be matched to any single row.

• IOFFICE- Est. and PTO, !WAREHOUSE LINE, CELITA VAN, HTS NISSAN VAN, and PATHWAY TRAILER had no calendar mentions at all in this window — nothing to match yet for those five.
